NOT FINDING ANY, GORE AIRBRUSHES IN HURRICANES FOR HIS NEW BOOK

by Anthony Watts | November 19, 2009

Al Gore's [new book](#) had a problem – no big hurricanes since Katrina to put in the book to look “threatening” to the USA. Any imagined link between hurricanes and global warming [has evaporated](#).

Solution: the artists airbrush.

Ryan Maue, [hurricane expert from the University of Florida](#) writes:

Anthony,

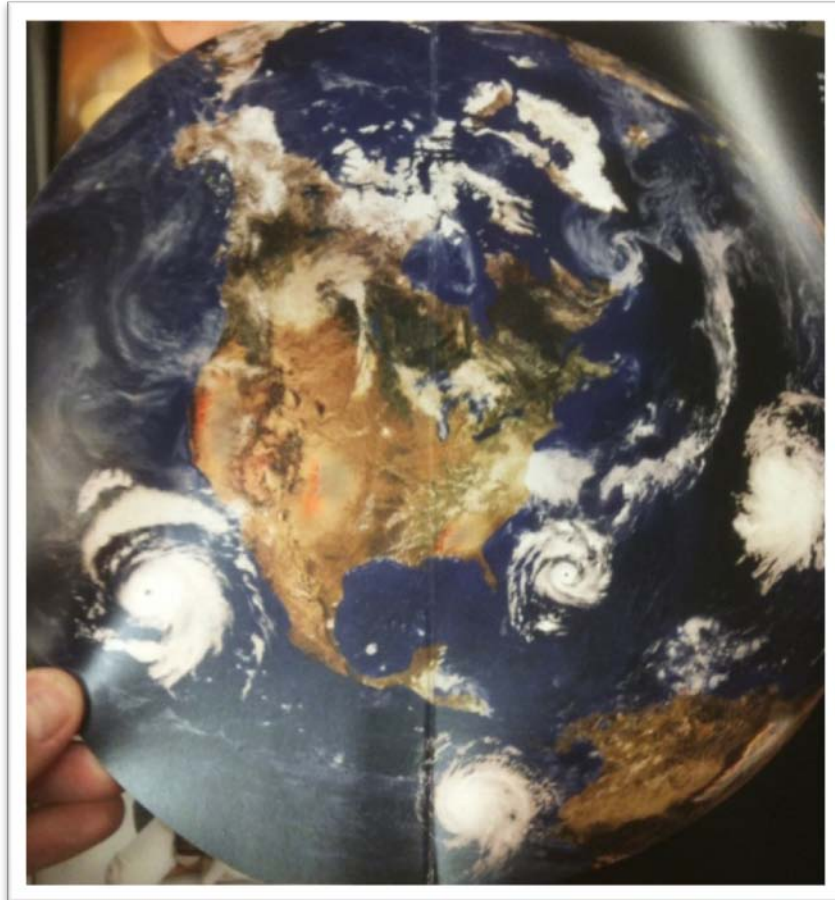

Not a lot of hurricanes here.

The cover opens and closes half and half — so you only see one hurricane...as in the press release photo or the one on Amazon.

But this is the real picture sequence from the book which I looked at Borders today and took cell-phone pictures, original (before the retouching by some “artist”) Note all of the Arctic ice and the size of the Florida Peninsula...

and the final product:

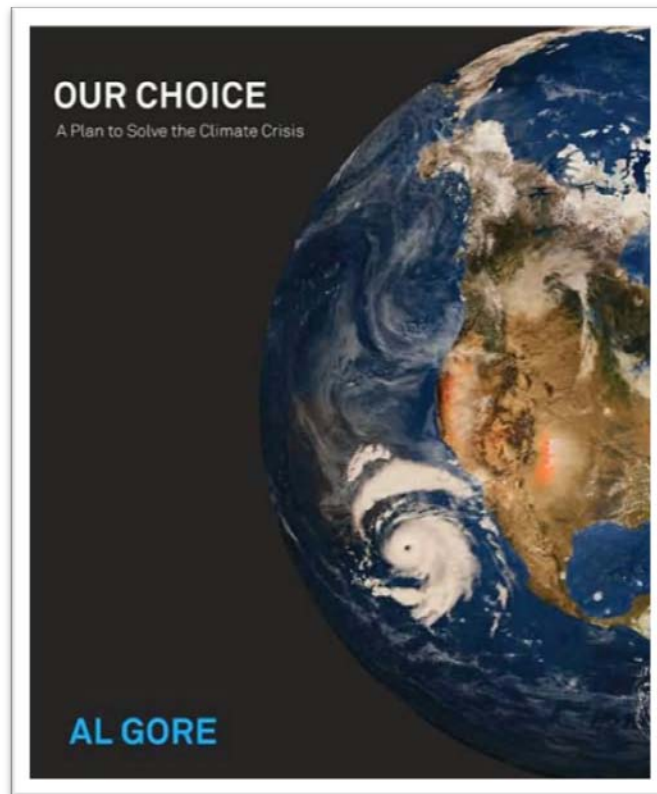

Now with 4 scary hurricanes - hey where's the ice?

WUWT?

A midget Southern Hemisphere cyclone is off the coast of Florida, another hurricane is sitting on the equator off the coast of Peru — and the Arctic Ice is gone (perhaps it is summer) and the Florida Peninsula is half gone.

There are other differences I am sure you can find — but the hurricanes are just nonsense...
Ryan

Here's the book cover:

Nonsense? No more like scaremongering, especially when it has been shown time and again that there is no hurricane to global warming linkage, and we are at a [30 year low](#).

Mr. Gore, you are a charlatan.
